About

PhantomEye GPS *Car and Motor-Cycle tracking* solution is the worlds most advanced, feature-rich, reliable and easy to set-up solution with easy access from the phantomeye.com website via a computer or mobile phone.

The solution is based on the Trimble GPS Hardware that has been specifically programmed to address the needs of vehicle hire, equipment rental and transport services businesses and for private use.

Benefits and Features

The key benefit of this monitoring solution is the “peace of mind” by having the knowledge that your vehicles and assets are monitored and locatable, besides extra benefits covered below.

All vehicle stops/starts are recorded : a 90 day historical record of where and when the vehicle started a trip from and where and when the trip ended.

All speed excesses over a set threshold are detected and reported : one of the major worries of parents of new teen age drivers is eliminated by recording the driving pattern of a young driver. Any speed excess over a set threshold (default is 110 KMPH / 69 MPH) is automatically reported. User can reset the threshold from the website.

On-device exclusion zones can be set and monitored : vehicle misuse by un-authorized trips is immediately notified to user via SMS and e-mail

1 Hz GPS position reporting: vehicle is tracked right upto the point before it goes inside a tunnel or under cover car park.

Tracking Unit can be polled: from website / mobile phone – allowing access to position on-demand

Last 1024 positions recorded on device: if required the unit can be queried for in-motion positions not sent to the web site.

Store and forward: the unit stores locations when moving in GSM black out areas. All stored messages are sent upon re-entering GSM coverage.

World wide coverage | Customisation available | Upgrade to remote car unlocking and remote car horn activation.
